

SOLID Bank Application THE BASICS: Introduction

Opening the app for the first time, it will prompt the user to create a new admin.

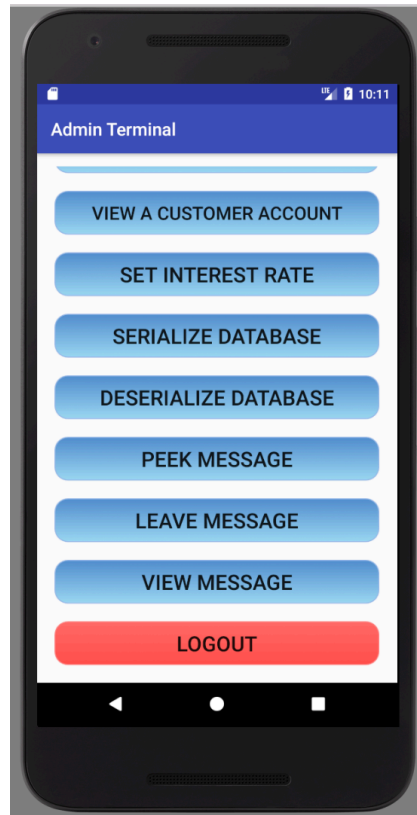

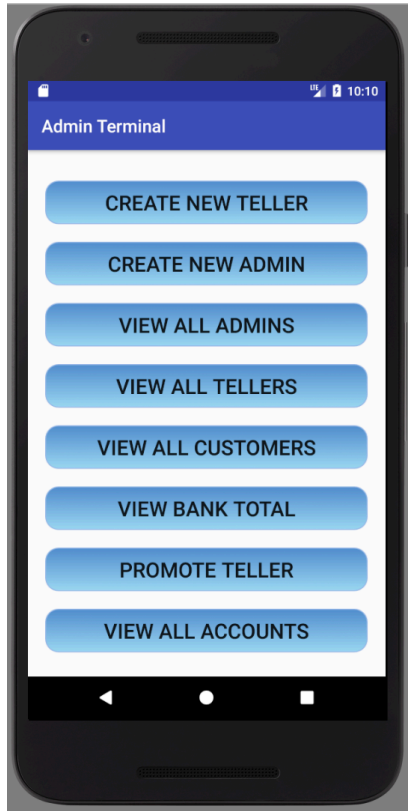

After creating a new admin, the user is directed to the main page of the app again, this time creating the first admin is no longer available to select.

Selecting any of the terminals will require the user for login information.

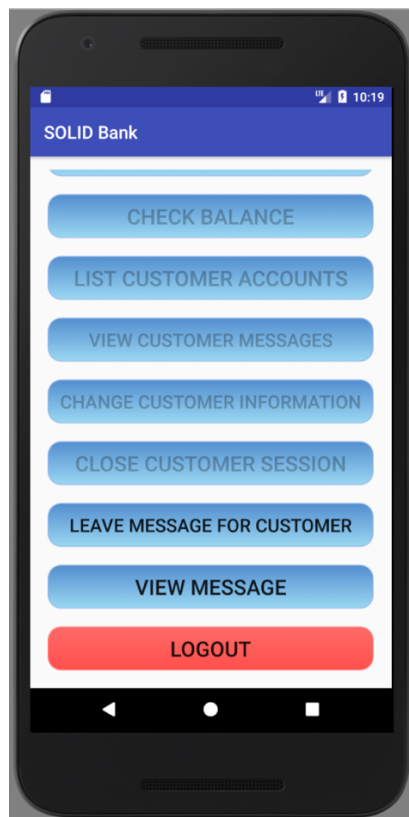

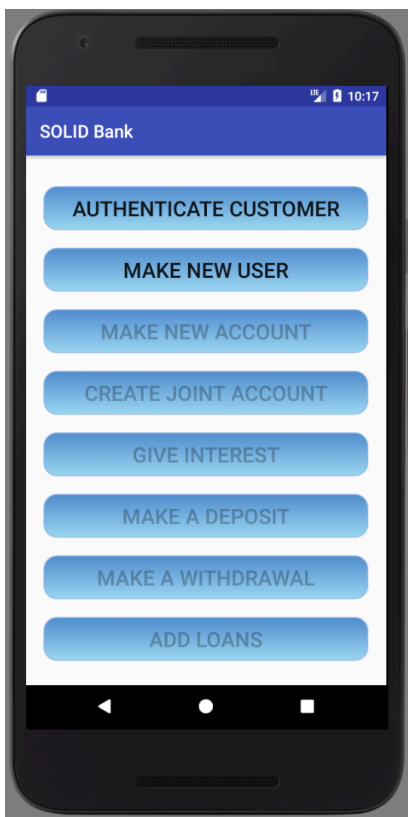

SOLID Bank Application: Admin Terminal

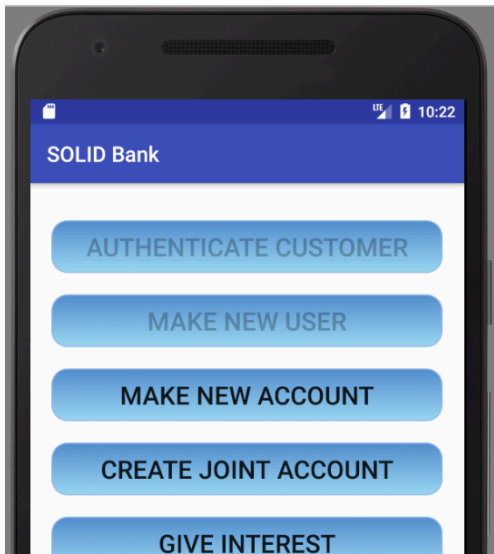

In the admin terminal, users can scroll and select the action they want to make.

Clicking the “LOGOUT” button will direct log the admin out and direct them back to the main page.

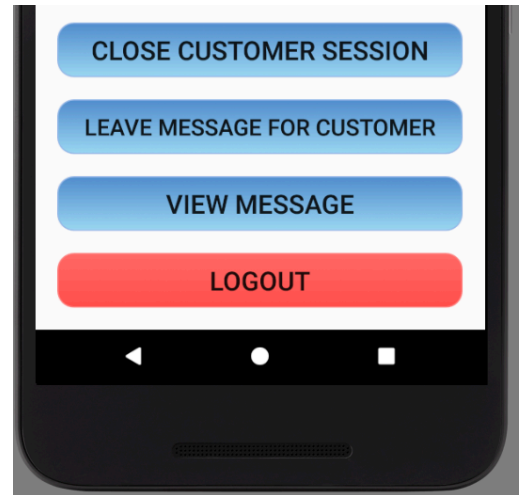

SOLID Bank Application: Teller Terminal

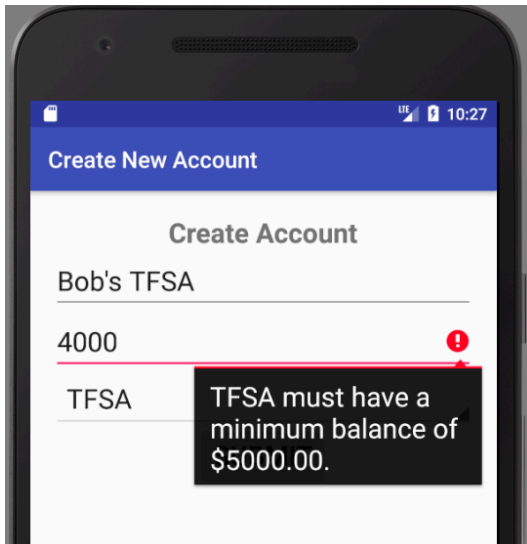

When logging into the teller terminal, if there is no current customer, the buttons regarding the customer cannot be selected.

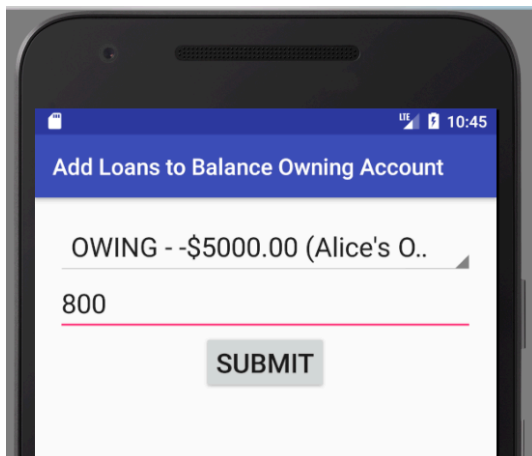

Creating a new customer will automatically authenticate and make them the current customer.

Select "CLOSE CUSTOMER SESSION" if you want to authenticate a different customer.

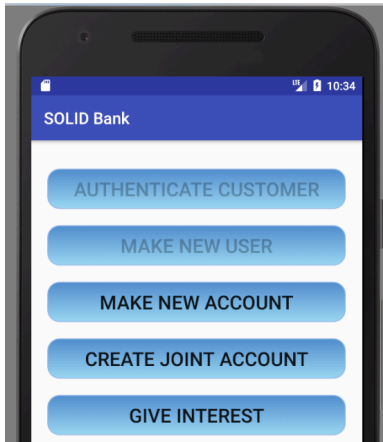

Creating TFSA's with a balance less than \$5000 is not allowed!

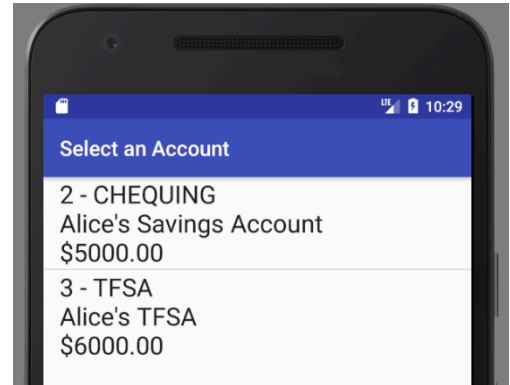

Add more loans to a customer's owing account by selecting "ADD LOANS" in the teller terminal menu!

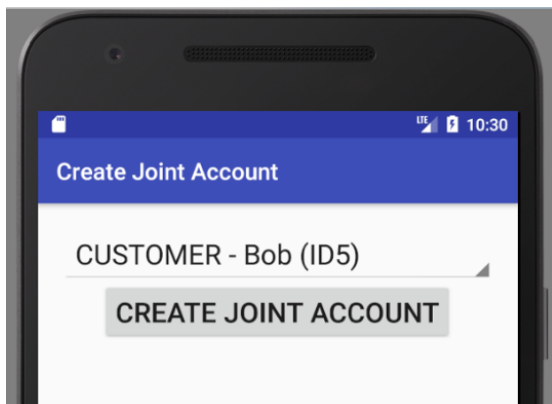

NEW FEATURE: Joint Accounts

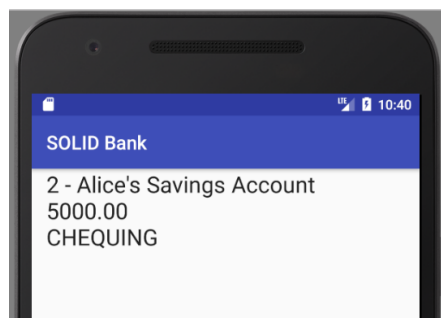

After authenticating a customer, the teller has the option to create a joint account.

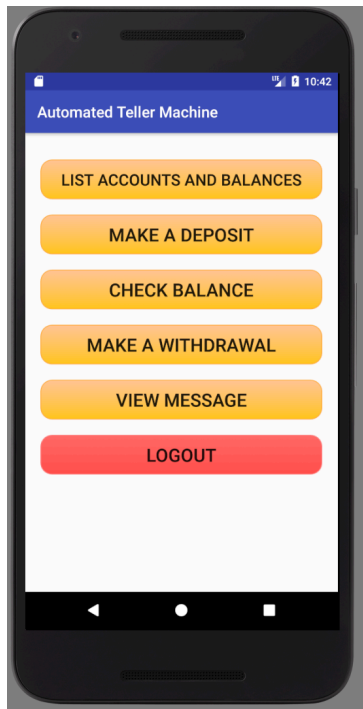

Select one of the current customers accounts they would like to join with another user.

After selecting the account to join, select a customer from the database to give them ownership to the account.

Now Bob has ownership to Alice's Savings Account which they will share equally.

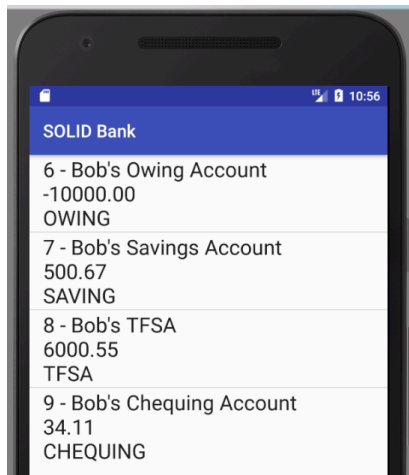

SOLID Bank Application: Automated Teller Machine

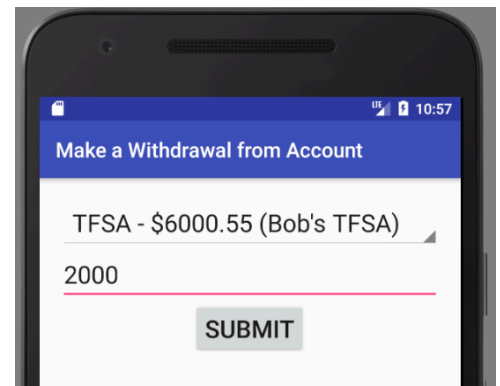

When logging into the ATM, customers have the option to select these actions.

SPECIAL NOTE: TFSAs

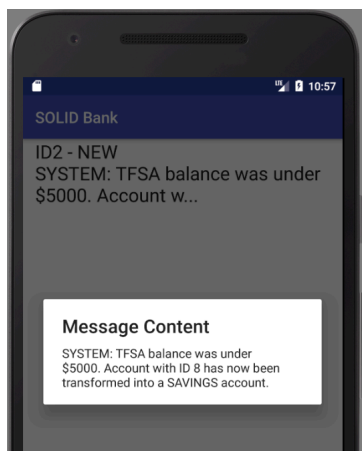

When withdrawing from TFSA's, if the balance is under \$5000, the account gets automatically changed into a Savings Account.

1. In this example, Bob has a TFSA with balance of \$6000.55

2. Bob decides to withdraw \$2000 from his TFSA.

3. Bob checks his messages and sees that his TFSA has been transformed into a Savings Account
